

## SUMMARY OF THE MEETING WITH CUSTOMERS

1. Functionalities of the system
  1. Explained and showed Current State View
    1. Wind speed needs also the max values
    2. River Bed Height & Water Level have to be on the same graph
    3. Put the units of measure on the graphs
    4. For the labels:
      1. specify that water level & river bed height are m asl (meter above sea level)
      2. add one more label that is the real water height (water level – river bed height); it is in meter
      3. the wind speed has to be converted (only for the labels) in km/h
  5. Still needed the other graphs (but we said him that we should first put some values on the DB to represent the M-N domain and the worst case table and so on)
  6. Add the T-D checkbox (like the historical page)
2. Explained and showed the Parameters page
  1. it is ok :-)
3. Explained and showed the historical page
  1. put on the same graph the water level and the river bed height and they should be in m asl
  2. the graph about the cs is needed
4. In the statistics page we can put all the statistics that we wants
5. He asked about the User Authentication System; we said him that we are working on it and we'll develop it before the final product deadline
2. We talked a lot about the DB and we heard his suggestions
3. We validated our calculations and they are ok (more or less)
4. We talked about the Source path and the configuration file and he said that it is a good idea
