

Week Report

| | | | |
|----------------|------------------------------------|-------------|------------|
| Project | Real-time Bridge Monitoring | Week | 44 |
| Name | Dzana Kujan | Date | 11.04.2013 |

Achievements

This week, we have been spending a lot of time understanding the requirements. The initial version of the project has been finished. I have created Use cases for the system and work has been started on the requirements document.

Problems

The requirements are still pretty unclear. We have received a lot of documentation in Italian and code (7000 lines) with comments in Italian. They are essential for understanding the system. The problem is that only two members of the team understand Italian, so Lorenzo is translating at the moment.

Plans for the next week

The plan for the next week is to finish the requirements and design document. Most importantly to understand the requirements.

Hours spent

| Day | Hours | Short description |
|--------------------|-------|--|
| Monday | 5 | Meeting + working on Project plan doc (5h) |
| Tuesday | 7.5 | Meeting(1.5h), Making questions for Andrea(2), Requirements doc + Use Cases(2), setting up environment (2) |
